Think the cell phone is a bit superfluous? I don't. I see great potential in the future of cell phones and particularly smartphones. And I think the earbuds and the noise-canceling headphones that will soon be a part of every cellphone will go a long way in making smartphones almost as useful as having a laptop with a large screen. In fact, I just had the phone on my desk today. Sure, it's a Samsung Galaxy S III, but I'm willing to overlook that. I know there's a time for every cellphone and every mobile phone manufacturer. Besides, I have a feeling that will fade and there will be a new smartphone hitting the market about every six months. So, in that sense, I'm a firm believer in the evolvability of the cell phone. It's all in what you make of it. Are you willing to learn a new set of rules, or do you see it as a gateway that allows you to quickly become a padawan of the smartphone universe? Are you willing to take the time to learn all the functionality of the interface? If you're really willing to invest the time and money, it can be a very rewarding experience. As state officials monitor damage from the "rogue wave" of tornadoes that barreled through Joplin, Mo., last week, they are also keeping an eye on this weekend's forecast. The National Oceanic and Atmospheric Administration (NOAA) says tornadoes are likely in northern Indiana and Illinois later this afternoon and in southern Wisconsin and Michigan on Saturday. "Some of the damaging winds, tornadoes and hail are also possible," said NOAA spokesman Bill Proenza. Forecasters say the severe storms are likely in northern Indiana, northern Illinois, southern Wisconsin and southern Michigan as a cold front collides with a low-pressure system, bringing damaging winds and hail. Residents are urged to stay alert and be prepared for the weather change. A NOAA statement says the chances of tornadoes continue to rise and the severity of the storms could increase. "The
