Use the MIN 2 as a stand-alone minilab or connect to any Hurco CNC mill for full 2 axis milling without.Chinese Strategy to Mislead Sign Up By Andy Pasztor January 2, 2016 All the world seems surprised to learn that, once again, China was the aggressor. In September, China’s air force bombed Japan-held islands in the East China Sea that both countries regard as being under their control. Over the past months, China has been airlifting coal from its inland mines to its coastal cities with the apparent aim of helping its water-starved northeast region. Its fleet of warships has been shadowing American

and Japanese warships. And, at the same time, China's increasingly sophisticated cyberattacks seem to be aimed at America and its allies, while its poorly organized, ill-equipped, and technologically backward armed forces seem to be pointed toward the United States. Even the normally disciplined Chinese would concede that they have been more hostile, more belligerent, and more bellicose toward their neighbors. To put it bluntly, China seems to be acting like an aggressive and belligerent regime. But this assessment would be incorrect. There is a long tradition of Chinese strategic thought on the subject, going back to Sun Tzu's ancient classic "The Art of War," which was itself an exercise in persuasion, not coercion. China's leaders would be wise to rely on this theory of war. The strategy of military deception involves obscuring the opponent's perception, making it hard for him to know what is going on, and then taking advantage of his ignorance, by acting in a way that does not conform to his expected pattern of behavior. Military deception is different from strategic surprise, though the effect on the enemy can be similar: It slows his response or makes him react as if he is in an unfamiliar situation. The goal is to make him guess wrong about what is happening, so that he commits forces to actions that are disadvantageous or, worse, do not even make sense in a completely honest context.
