Family hotel Family hotel (also known as self-catering hotels, self-catering accommodation, family guest house, and children's hotel) is a type of lodging facility that caters specifically to a family. Such hotels are usually smaller than those designed to host adults only, and have fewer facilities. Attractions include a kitchenette or kitchenette-equipped room, a space for sleeping, and a living area that can accommodate a minimum of two people. Family hotels can be found in urban areas such as metros, in suburban areas, and in rural settings. In the United States, "family hotel" is an official designation by the Hotel & Motel Association of America, and "family guest house" is the official designation by the International Accommodations Brokers Association. In Great Britain, most hotels catering to families are of a slightly larger scale than those catering to adults. One distinguishing feature is that they may have separate sleeping areas. These tend to be located at the back of the hotel building, usually called the basement or basement annex. These rooms are often insulated from the rest of the building, and have their own lighting and heating.

Q: Are these vectors in the same  $\mathbb{R}$ -subspace?  $M_2(\mathbb{R})$  is a vector space over the field  $\mathbb{R}$ . Let  $v_1=(1,0)^T$  and  $v_2=(0,1)^T$ . I have to show that these two vectors  $v_1$  and  $v_2$  are not in the same  $\mathbb{R}$ -subspace. I do not know how to approach this problem. Can anybody tell me how to do it?
