by Anu Malik1. Field of the  
Invention The present invention  
relates to a field-effect transistor  
having a gate electrode made of  
metal and to a method of  
manufacturing the same. 2.  
Description of the Related Art With  
the recent progress in large-scale

integration of semiconductor devices, attention has been paid to aluminum as a material for forming a gate electrode and interconnection lines on the semiconductor substrate. Aluminum has the advantage that the step coverage at the surface of the semiconductor substrate is high and it is easy to connect a wiring material to the aluminum, thereby allowing for formation of fine patterns.

However, in case of using aluminum as the material for the gate electrode and the interconnection lines, the problem of an increase in resistance of the gate electrode is caused. In

---

order to solve this problem, it is conceivable to dope impurities, such as phosphorous or boron, into aluminum. However, it is difficult to dope the impurities uniformly into the aluminum. Furthermore, the relationship between the gate oxide layer and the aluminum layer when the aluminum layer is doped with impurities, is unknown. Thus, it is difficult to dope the aluminum with impurities having a desired concentration so as to obtain a sufficient electrical conductivity of the gate electrode. Moreover, in the case of using aluminum as the

---

material for the gate electrode and the interconnection lines, as described above, the problem of an increase in resistance of the gate electrode is caused. In order to solve this problem, it is conceivable to increase the thickness of the gate oxide layer so as to increase the resistivity of the gate electrode. However, in this case, the short-channel effect is caused. Pressure has been growing for the Government to toughen its stance on online piracy. It's a high-profile campaign that's been led by Google, but others are concerned about the impact that the

---

proposed measures could have on the Australian creative community. For a number of years, the MPAA, IFPI and Google have been working together to address online piracy, in particular with online advertising. In late April, the New South Wales Government announced the creation of the Australian Digital Alliance (ADA), which
